Hi Eric,

It was good talking with you today regarding the Merrimack River temperature studies. As I mentioned, attached are some graphics showing minimum water temp and specific conductance values recorded at the discontinued QW streamgage on the Merrimack River at West Newbury, MA (01100750).

Also included are the excel files that are named with the year and stat1 (max daily value). Days with no values have missing record. If you need daily values for daily minimum and daily mean temp, I can send those also.

Please call me if you have any questions regarding the data or about the Merrimack River (MA portion) in general.

Thanks,
Roy
